

436 individuals (402 kept, 34 excluded); MAPQ ≥ 20, duplicates excluded; clade = prior_clade (sample_metadata.tsv)

436 individuals (402 kept, 34 excluded); MAPQ ≥ 20, duplicates excluded; clade = prior_clade (sample_metadata.tsv); bar = median

436 individuals (402 kept, 34 excluded); MAPQ ≥ 20, duplicates excluded; clade = prior_clade (sample_metadata.tsv); thin lines = individuals

1.0 = as expected; ~0.5 on one chromosome in some individuals suggests a sex chromosome; whole-column shifts = mappability/repeat content
